

ELECTRO-MEDICAL EQUIPMENT

SET YOUR MARK FOR SUCCESS.

Electro-medical products may attract buyers with their brand names and innovative technology. But they won't even get to market in North America *without the right certification mark*. That's because product certification is a requirement under North American law for the sale of electro-medical equipment. The CSA mark is one of two major marks accepted in North America and appears on billions of qualified products world wide. With a 90-year heritage in standards development, CSA International is a leading certification organization in North America, accredited and accepted as an official testing and certification organization by: American National Standards Institute (ANSI) / Occupational Safety and Health Administration (OSHA) / Standards Council of Canada (SCC). CSA International is also accredited by the International Electro Technical Committee as a National Certification Body in the CB Scheme.
